The new Add() command can be used to create a customized object on top of a base object. The Add() function lets you add new objects (e.g., custom shapes, lines, text styles, etc.) to an existing drawing. The new Data Options for placing reference objects in an image can be set to fit the selected dimensions, start the alignment at the top left corner, or use a vertical (bottom left) or horizontal (top left) snap. The new DesignCenter (a.k.a. "Quick Search") now includes thumbnails of related objects. There's a new tool palette icon in the Rotate & Flip toolbar, which lets you click on a horizontal or vertical line and instantly rotate a 2D or 3D view 90, 180, 270, or 360 degrees. The 2D Drawing Tools toolbar has a new command, Lock, which sets the current drawing view to a specified unit or dimension system. The automatic recording of object pick points is more intelligent and can be overridden by a single user. The new User Recorded object pick points are recorded with a unique ID and time stamp, so you can easily access the last recorded points in the event you mistakenly remove one. The new Edit tab in the Edit toolbar has a shape zoom and a new spline tool. The snap toggle commands in the 3D Drawing toolbars have been replaced with a new menu item, Snap. The "Paste Selection As" options are now available when pasting an AutoCAD drawing into a third-party application, such as Revit. Extend Tools: Extend is a new "one-button" command, which extends a group to the current selected size. The Extend command also preserves layers and linetypes in the current drawing. The new command, Draw from the Zones, which creates a drawing outline of existing layers in the drawing, has been added. This is similar to the prior command, "Draw From the Zones." The new polyline symbol, Polyline Ext, has been added. Use this symbol to create polylines that extend from selected point patterns or to create linearized multipolyline curves.
